

What is Complex Regional Pain Syndrome (CRPS)?

CRPS, formerly known as Reflex Sympathetic Dystrophy (RSD), is a chronic neurological syndrome characterized by:

- severe burning pain
- pathological changes in bone and skin
- excessive sweating
- tissue swelling
- extreme sensitivity to touch

CRPS is a malfunction of part of the nervous system. Nerves misfire, sending constant pain signals to the brain. It develops in response to an event the body regards as traumatic, such as an accident or a medical procedure. This syndrome may follow 5% of all nerve injuries.

A physician must make a clinical diagnosis of CRPS using a patient's history, a thorough examination, and the results of numerous tests. There is no single test for CRPS.

Early diagnosis and treatment can change the course of the syndrome, making professional and public awareness an essential.

RSDSA is a 501(c)3 not-for-profit organization founded in 1984 to promote public and professional awareness and education of CRPS, and are committed to raising funds for research into the cause and cure of CRPS.
